

Modulbezeichnung	Real-time Operating Systems Development								
Modulverantwortliche(r)	Jan Peleska								
Modulart	Pflicht/Wahl <input type="checkbox"/> Wahlpflicht <input checked="" type="checkbox"/>								
Spezialisierungsbereich	Automatisierung und Robotik, Systemsoftware / Eingebettete Systeme, Raumfahrt-Systemtechnik								
Dauer des Moduls	1 Semester								
Kreditpunkte	6 CP								
Arbeitsaufwand	<table> <tr> <td>Berechnung des Workloads</td> <td></td> </tr> <tr> <td>Präsenz</td> <td>0 h</td> </tr> <tr> <td>Übungsbetrieb/Prüfungsvorbereitung</td> <td>180 h</td> </tr> <tr> <td>Summe</td> <td>180 h</td> </tr> </table>	Berechnung des Workloads		Präsenz	0 h	Übungsbetrieb/Prüfungsvorbereitung	180 h	Summe	180 h
Berechnung des Workloads									
Präsenz	0 h								
Übungsbetrieb/Prüfungsvorbereitung	180 h								
Summe	180 h								
Turnus des Moduls	every year								
Voraussetzung für die Teilnahme	<p>Keine <input type="checkbox"/></p> <p>Folgende <input type="checkbox"/></p> <p>Formale Voraussetzungen: Keine Inhaltliche Voraussetzungen: Good programming skills in C are mandatory. A thorough understanding of basic operating systems concepts is very helpful for this lecture.</p>								
Lehr- und Lernformen	<p>Seminar <input type="checkbox"/></p> <p>Vorlesung <input checked="" type="checkbox"/></p> <p>Tutorium <input checked="" type="checkbox"/></p> <p>Praktikum <input type="checkbox"/></p> <p>Projekt <input type="checkbox"/></p>								
Lernziele	<p>Students</p> <ol style="list-style-type: none"> 1) know how to program a real-time application from scratch on "bare-metal", that is, WITHOUT a supporting operating systems 2) know how to design an elegant real-time operating system kernel from scratch 3) understand the right balance between architectural beauty and optimised performance 4) know about basic benchmarks assessing the real-time capabilities of an RTOS 5) know how to do practical real-time application programming and RTOS development from scratch on a simple ARM-based computer architecture (BeagleBone Black) 								
Lerninhalte	<ol style="list-style-type: none"> 1) Bare-metal programming on BeagleBone Black boards using the Code Composer Studio development environment (Eclipse-based) 2) The State Machine programming paradigm with cooperative multi-tasking, scheduling, watchdog monitor 3) Periodic time-controlled activities 4) Simple context switching: Programming user threads and associated schedulers 5) Inspiration from micro kernels: RTOS architecture with communication channels and ports 6) Filtered and prioritised real-time port handling 7) Real-time synchronisation mechanisms 8) Time-triggered versus event-based RTOS paradigms 9) RTOS Benchmarks 								
Prüfungsformen	<p>Oral module examination or</p> <p>Exercises and oral technical discussion (Fachgespräch)</p>
